How to Get Computing Resources for DSA5208: Scalable Distributed Computing for Data Science

Cai Zhenning & Anthony Chen

August 17, 2026

1 How to Claim Your Google Cloud Coupon

Please follow the steps below to claim Google Cloud education credits.

- Open the following link in your web browser:

  Student Coupon Retrieval Link

- Enter your name and your **university email address** in the form and click **Submit**.
- Wait for an email containing the coupon code. The title should be **"Your Google Cloud Education Credits for Students"**.
- Log in to your Google account and visit

  `https://console.cloud.google.com/education`.

  Enter the coupon code from the email and click **Accept and continue**.
- You will be redirected to Google Cloud's billing page. Click **Credits** on the left-hand menu to confirm that the education credit has been applied to your account. The remaining balance should be displayed as **$50.00**.

2 How to Get an HPC Account

Please follow the steps below to apply for an HPC account.

- Visit the following website (you may need to log into NUS VPN if you are off-campus):

  https://nusit.nus.edu.sg/hpc/get-an-hpc-account/

- Click on **Click to Register**. You will be redirected to the online HPC Registration Form.
- Fill in the form with your details:
  1. **Title**: Choose your title (Mr, Ms, Mrs, Dr).
  2. **First Name**: Enter your first name.
  3. **Last Name**: Enter your last name.
  4. **Position**: Choose **Postgraduate**.
  5. **Department**: Choose **Mathematics**.
  6. **Project title / Course name**: Enter **DSA5208: Scalable Distributed Computing for Data Science**.
  7. **Supervisor / Course instructor name / Dept Sponsor**: Enter **Anthony Chen**.
  8. **NUS email for Supervisor**: Enter **cygnari@nus.edu.sg**.
  9. **List the Software that you intend to use**: Enter **MPI, OpenMP, CUDA, Kokkos**.
  10. **Software Use**: Select **Yes, I agree**.
  11. **Acceptable Use Policy**: Select **Yes, I agree**.
  12. **Research Domain**: Enter **Scalable Distributed Computing for Data Science**.
  13. **Research Objectives and Methodology**: Enter **To study and apply parallel computing frameworks and HPC resources, including MPI, OpenMP, CUDA, and Kokkos, for scalable distributed data science workloads.**
  14. **Research Impact / Relevance**: Enter **This provides hands-on experience with high-performance computing for large-scale data science applications and supports efficient processing of computationally intensive tasks.**
  15. **Acknowledging NUS IT Research Computing Resources**: Select **Yes, I acknowledge**.
- Once your application is approved, verify your application by logging in to the server `atlas8.nus.edu.sg` and `vanda.nus.edu.sg` using your NUSNET ID and password. You can use SSH to connect to the server. NUS VPN is required if you are off-campus.

– **Windows:** Open **PowerShell** or **Command Prompt** and run:

```
ssh yourNUSNETID@vanda.nus.edu.sg
```
or
```
ssh yourNUSNETID@atlas8.nus.edu.sg
```

Enter your NUSNET password when prompted. If SSH is not enabled, install the OpenSSH client from **Settings** → **Apps** → **Optional features**, or use a terminal client such as MobaXterm.

– **macOS:** Open **Terminal** and run:

```
ssh yourNUSNETID@vanda.nus.edu.sg
```
or
```
ssh yourNUSNETID@atlas8.nus.edu.sg
```

Enter your NUSNET password when prompted.

– **Linux:** Open a terminal and run:

```
ssh yourNUSNETID@vanda.nus.edu.sg
```
or
```
ssh yourNUSNETID@atlas8.nus.edu.sg
```

Enter your NUSNET password when prompted.
